

RACE PROVEN

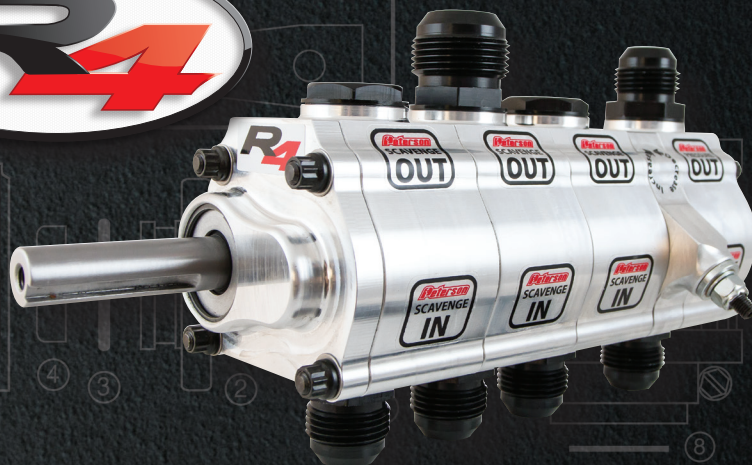

COUNT ON NEARLY 50 YEARS OF DEDICATION TO EXCELLENCE.

SERIOUS OIL PUMPS

If oil is the life blood of your engine, then the pump is critical in keeping vital components from meltdown. The unique Peterson R4 rotor design develops solid oil pressure, even at high temperature conditions and it pulls serious vacuum too. Heavy-weight performance without the heft - shallow depth screw-in fittings and profile machining makes the R4 one of the lightest pumps available. A standard rear drive setup allows for direct mounting of all popular drive accessories. Fire it up, forget about it and know that R4 will help ensure your engine never misses a beat.

REMOTE FILTER MOUNT & ENGINE OIL PRIMER

Never fire a dry engine again. Guarantee engine oil pressure before every start, reducing premature wear on internal components and bearing surfaces. Using a standard drill and the unique Peterson R4 rotor design, this small pump delivers 20psi in as little as 10 seconds. Rugged, billet aluminum construction for years of abuse helps ensure your engine lives to fight another day.

DRIVE COMPONENTS

Peterson's drive components are machined in house out of billet aluminum and high quality steel. All of our aluminum parts are hard coat anodized for durability and long service life. We only use high quality belts and fasteners to make sure your drive system won't let you down.
